

Interactive Map Search

The interactive map gives access to many different types of data from the underlying databases that are continuously updated and supplemented to ensure high quality and comprehensive datasets. Different kinds of search and filtering functionality makes custom queries easy and metadata as well as detailed information for individual data records provides good information about the content. For some data types such as geophysical and

geochemical data simple add to basket buttons makes it easy to gather data of interest that can then subsequently be checked out and downloaded. Additional types of data as well as new or improved functionality are continuously added to the Greenland Mineral Resources Portal to fulfil the vision of the portal as being the one-stop shop to geoscience information from Greenland.

Web Shop

Numerous products including geophysical and geochemical data, scanned geological map sheets and digital geological maps as GIS files can be

acquired through the integrated web shop. Most products are free of charge, whereas some can be purchased by credit card. Selected products can be downloaded after a simple online registration.
